(54) Title: COMMUNICATING INFORMATION ASSOCIATED WITH PROVISIONING OF A SERVICE, OVER A USER PLANE CONNECTION

(57) **Abstract:** A method of communicating information associated with provisioning of a service in a communication system and arrangement for the same is disclosed. In the method information about possible associations between an identifier of a mobile user equipment (10) and user plane addresses is stored in storage means (34). A service provisioning entity may receive a request for the service from a client (24) connected to the communication system. Said request includes an identifier of the mobile user equipment. It is verified if a user plane address can be found from the storage means based on the identifier. If such a user plane address is found from the storage means, data associated with provisioning of the requested service is communicated to the mobile user equipment over a user plane connection associated with said address found from the storage means. If no user plane address can be found from the storage means based on the identifier, a new user plane connection is established, and data associated with provisioning of the requested service is communicated to the mobile user equipment over said established user plane connection.
